KEYMACRO is designed to solve the Microsoft Windows key on Keyman keyboard issue for Dell, Lenovo, Asus, HP, Samsung, Apple, and all other leading keyboard brands. Keyman keyboard is a unique keyboard that contains a special chip that generates keystrokes of the user's computer. You can have a special password for the users to login to your computer. This keyboard chip is a very good concept and has been adopted by other manufacturers. But it has a problem. The login password cannot be remembered by the users and they need to write it down or type it again each time when they need to login to your computer. The solution is: Keyman is a free software that works with the log in password and allows you to use your password on your computer as keyboard input. Keyman allows you to add a key that runs a command that will log you in, and then run your command. This will set you up to use your password as your login password. Keyman has 2 versions: Keyman Basic lets you only create a login password and an optional "power on" password. Keyman Extended lets you not only create a login password, but also allows you to create a special "signature" button. With this button you can run any command you want at any time. Keyman Extended will also allow you to create multiple log in passwords. KEYMACRO Benefits: You can have a special login password that the user will not forget. You can use it to log in to your computer. It works with any keyman keyboard. You can use it with any computer. KEYMACRO Key Features: Create a password Create a power on password Include/exclude certain characters Include/exclude certain keystrokes Include/exclude certain keys from the keystrokes Additional Features: Save and load password.
