Draw a black rectilinear shape on a new document (File -> New -> Rectangle, or Layers -> New -> Rectangular). 2. Select the Rectangle Layer. 3. Click the Layer's name (in the Layers panel, to the left of the list of layers). 4. A menu should pop-up that says something like "Move Layer." 5. Click the "Move" menu item, and the Move tool should appear in the toolbox (but not in the Layers panel). 6. Click and drag the shape you just drew over the top of the Background layer. 7. Position the mouse cursor in the lower right-hand corner of the shape where the mouse cursor turns into two arrows. 8. Click and drag the mouse cursor to create a new layer above the Background

layer. 9. Click the Layers panel's "Merge Down" menu item and select "Merge Visible" from the pop-up menu. A merge down creates a new layer containing the contents of the Background layer and adds it to the Layer panel. 10. Double-click the line representing the first layer in the Layer panel to select it. 11. Double-click the line representing the second layer in the Layer panel to select it. 12. Click the "Layer's name" menu item (in the Layers panel, to the left of the list of layers) and rename the new layer "Rectangle." 13. Click the New Layer button (top right of the Layers panel) and select "New Layer from Visible." This command creates a new layer that is visible in the document, and that is based on the layer above it. 14.

The program was originally marketed to "home users", but later added features to appeal to professional photographers and graphic designers. There is a strong base of professionals who use Photoshop Elements to work with photographs. The program is also frequently used for simple web design, such as mockups of websites and logos. Elements is available on Windows, macOS, and Linux. You can also search for software that can be used to import pictures from your digital camera and edit them in Photoshop Elements like using a photo editor. Photoshop Elements Overview Photoshop Elements 11 allows for the editing of many different kinds of images using various tools. You can edit photos, create graphics, find text, crop and rotate, create beautiful typographic designs, and even create animated GIFs. You can import and export your files to and from Photoshop and other desktop image-editing programs. Adobe Photoshop Elements features: Editing photos: An invaluable program for any photo editing you want to do. There are more than a dozen filters, color adjustment, and masking tools. You can retouch and repair faded or damaged images with repair tools, and resize, crop, adjust exposure, contrast, and shadows and highlights. Adding text: One of the best features in Elements is the ability to add text to images. The program makes it easy for you to create logos, signatures, text animations, or a cartoon

character and give your images personality. You can also choose from hundreds of fonts and place them anywhere on your image. Creating Graphics: The program makes it easy to create graphics using the lines, shapes, textures, and photographs of the images, making it easy to design anything you like. You can edit and modify the space using drop-shadows and a wide variety of 3D tools. You can create professional-looking graphics for online ads, newsletters, magazines, and more. Rotating and Cropping images: Photoshop Elements rotates and crops images without losing image quality. You can crop your images down to 1/16 of a percent of the original. You can also rotate your images through 90 degrees. Creating animated GIFs: You can add animation to your images by changing the colors, cutting out objects, or moving your image. You can save your images as PNG files. Exporting and Importing: You can export your files to popular formats such as JPEGs, JPGs, PDFs, PNGs, and GIFs. You can

Q: Cannot read property 'map' of undefined I'm having some trouble with returning results from an API call, using this request:

```
router.get('/cadastro/',(req, res) => { const valueCadastro = req.body; const valueCadastroForm = valueCadastro; expect.request(req) .get("") .set('Authorization', 'Bearer --token (values)') .set('Accept', 'application/json') .end((err, res) => { if (err) { res.status(500).json({ message: 'Erro' }); console.log('ERRO', err); } else { const data = req.body; const dados = valueCadastroForm.map(item => { return { id: valueCadastroForm.id, nome: valueCadastroForm.nome, dataInicial: valueCadastroForm.dataInicial, dataFinal: valueCadastroForm.dataFinal, dataInicialProposta: valueCadastroForm.dataInicialProposta }; }); // res.json(data); res.status(200).json(data); } }); });
```

Then, I'm using this code in another API method to return the same results from the first API. (called cadastroAPI)

```
router.post('/cadastroProduto/',(req, res) => { const valueProduto = req.body; expect.request(req) .post("") .set('Authorization', 'Bearer --token (values)') .set('Accept', 'application/json') .end(function(
