In order to evaluate the effects of diabetes on K+/Na+ homeostasis, the state of blood pressure and electrolyte levels was compared in the basal condition and after an acute stress. The results indicated that the homeostatic mechanisms of the chronic diabetic body adaptively change according to the degree of the disease and that the recovery from this adaptation is slow. Especially, potassium levels decreased with the development of the disease, while sodium levels increased with the same.// // SketchShapelnputView.swift // Beam // // Created by Geoffrey Kirk on 9/3/19. // Copyright © 2019 SoundKit.
