This is because, even after appropriate antimicrobial therapy for intravascular catheter-related IE, the mortality still remains as high as 30%. Clinicians should maintain a high index of suspicion for IE in any patient with culture-negative endocarditis who presents with fever of unknown origin. Conclusion {#sec1-3} ===== Blood cultures may be negative in patients with endocarditis. In such patients, clinical suspicion is still essential to initiate appropriate treatment. A thorough history and physical examination with an assessment of preexisting medical conditions and clinical features suspicious for IE is important. If the diagnosis of endocarditis is suspected, endocardial murmur should be evaluated. In patients with suspected IE, echocardiography is the most effective imaging modality for detecting endocardial disease. However, intravenous contrast-enhanced echocardiography should be considered in patients with evidence of IE for the early diagnosis of cardiac involvement or complications. Financial support and sponsorship {#sec2-1} ----- Nil. Conflicts of interest {#sec2-2} ----- There are no conflicts of interest. Tagged With pasta "I am Asian, and I'm having a hard time with this," exclaims the guest who has joined us on TODAY. He's been in America for only a couple of years, but is already learning new things about himself every day. In this week's edition of "New Man New Me", he's tackling stereotypes about Asians. And in one of the most famous ads ever, his peers are the subject. When I was a kid, I didn't recognize my own likeness in that famous television commercial that became an iconic part of American culture. I didn't recognize the customers in the restaurant
