Silverlight Controls is a suite featuring several powerful tools and controls that can help you design highly interface web-based applications under the Microsoft Silverlight framework in a more convenient manner. The suite bundles numerous product that enables you to manage most aspects involved in designing and controlling your app, namely vector-based barcodes, minimalistic charts for visualizing complex data and a syntax highlight code editor that can give you a hand with parsing the suite. In addition, the app includes utensils that allow you to quickly create wizard dialogs, views that work with fluid items or animated layouts and a set of shared libraries where you can quickly find Silverlight components that you might need for your project. It is important to note that the utility includes extensive documentation that can provide you with a lot of details or step by step guides on how to perform a certain task. Consequentially, in case you are unsure about the role of a feature or how you can use it in your project you can consider reading more about it from the Feature Summary. Alternatively, you can consult the documentation file you can find in the installation folder. In addition to providing you with essential components for the application, the suite also simplifies the deployment operation. To be more precise, you simply need to copy the several redistributable assemblies to the same folder as the application executable file to deploy it. In case you need to make modifications, then you should keep in mind that you can do so via the SyntaxEditor function.
